

Grape is safer by design.

Protect your valuable company data from curious eyes.

Get the best product with the highest security standards. Outside the US FISA warrant territory and used by some of the biggest critical infrastructure companies.

☑☑☐ Secure Processes.

Our internal coding and security standards have been proven by excellent external and customer reviews. From secure offices, over access logging to extensive employee background checks.

The Alliance.

Grape is participating in security workshops and European security alliances, like the German alliance for cyber security.

Penetration Tests.

White Box Penetration Tests by external partners and security training for our team to learn about new attacks and risks.

On top of the game.

We monitor all libraries, used by third parties and our own infrastructure. On-Premises admins receive critical patches within 48h.

Powerful Security Partner.

SBA Research collaborates with renowned national and international partners in multiple projects enhancing cyber security. From consortiums like W3C over threat scenario research or training for countries like Germany, Austria and Vietnam to EUROPOL. With some of their partners invested in Grape we are happy to have a someone on board that can dedicate some of the most experienced researchers into our – and consequently your – security.

“Grape has been a partner and investment of us for quite some time. We cooperate on projects and regularly educate their team on information security.”

Markus Klemen
CEO at SBA-Research
& Lecturer at TU
Vienna

Network Security.

Communication between clients and servers are always encrypted with 256-bit TLS. Prevention of downgrade attacks. Best-practice hardening concepts are continuously applied on our cloud infrastructure.

Political Security.

Grape is immune to US data enquiries through the Patriot-, Freedom- or Cloud Act. With this European enterprise messenger you are save from these warrants, no matter if you use our cloud or server version.

+25.000

Microsoft accounts were affected by FISA warrants in 2016*.

VS.

0

Grape accounts were affected by FISA warrants, period.

On-premises capability.

Every software provider wants you to switch to the cloud, but sometimes this is not an option for companies. Grape is committed to provide the exact same feature set for its on-premises version to ensure that you can run Grape from anywhere you like.

Your updates, your availability:

Grape comes with powerful built-in monitoring features and can be updated with the click of a button.

Your network, your rules:

Countless network and application settings allow you to shape the system to your enterprises requirements.

Documentation:
chatgrape.com/doc

Database encryption.

All systems are encrypted on Harddrive and database level. The keys are stored on the application side and unretrievable via DB or Admin-Interface.

Euro-Cloud capability.

Utilize the Grape cloud and run your system at one of our vendors or in one of our datacenters in Germany or Austria.
